SFARI SIMONS FOUNDATION
AUTISM RESEARCH INITIATIVE

Endowment: ~\$3B
Budget in 2020
~\$512M

Mission: improve the understanding, diagnosis and treatment of autism spectrum disorders (ASD) by funding innovative research of the highest quality and relevance

Identify risk factors whether genetic, environmental or epidemiological.

Use non-human organisms to understand how these risk factors alter brain function and animal behavior.

Promote preclinical and clinical investigations to improve autism diagnosis & therapy.

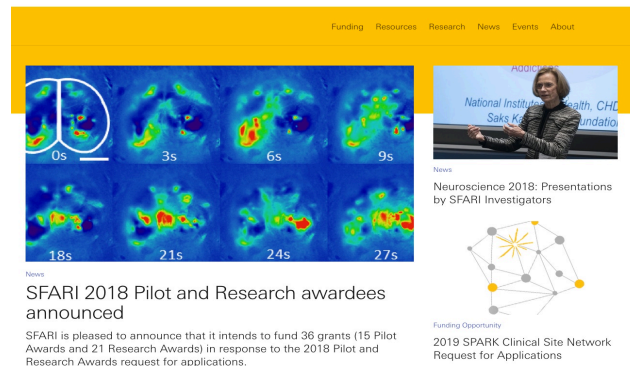

Simons Foundation Autism Research Initiative (SFARI)

- 2020 budget: **\$92 million**
- Since launch in 2003: **>\$525 million** in external research support
- **>550 investigators**

Data Sharing Policy

SFARI aims to support reproducible scientific research of the highest quality. This can be greatly facilitated by making all raw data, analysis methods, and, when applicable, computer code, available to the research community as quickly and transparently as possible.

Data generated from collections is considered “community resources” and, as such, all these data, including, but not limited to, alignment files and variant calls, will be made available to the entire research community, pre-publication, in real-time, as they are produced.

Besides being subject to any limitations by consent and IRB protocol, a publication embargo will also be enforced for 6 months after the defined project is complete while foundation-sponsored analyses are underway.

Intellectual Property

The Simons Foundation has no wish to participate in the commercialization of any intellectual property that may result from a grant. Notwithstanding this commercialization disclaimer, the Simons Foundation has the right to release a summary of findings of the research within a reasonable period of time, typically within six (6) months of the date of the grant expiration.

Some Current Funding Opportunities

Funding Opportunity

2021 Human Cognitive and Behavioral
Science – Request for Applications

To produce foundational knowledge about neurobehavioral differences associated with ASD, which will directly inform the development of refinement of tools needed for translational efforts, such as biomarkers and outcome measures.

Quantitative and objective measures of human behavior

- Psychophysics
- Computer vision and machine learning
- Wearables and app-based data collection

Human neuroscience

- EEG, fMRI, MEG

Encourage use of SPARK and Simons Searchlight
Research Match

SFARI Base

SFARI Base is a clearinghouse for autism and autism-related research data and biospecimens supported by the SFARI funding as well as an online portal for the submission of research recruitment requests

The use of SFARI cohorts(SSC, Simons Searchlight and AIC) data and biospecimens is limited to projects related to advancing the field of autism and related neurodevelopmental disorder research. SPARK phenotypic and genomic data does not have this limitation. Applications will be reviewed to ensure the use of data and biospecimens is in compliance with the Institutional Review Board (IRB)-approved consent language.

All investigators using SFARI resources must adhere to the guidelines outlined in our Acknowledgement Policy.

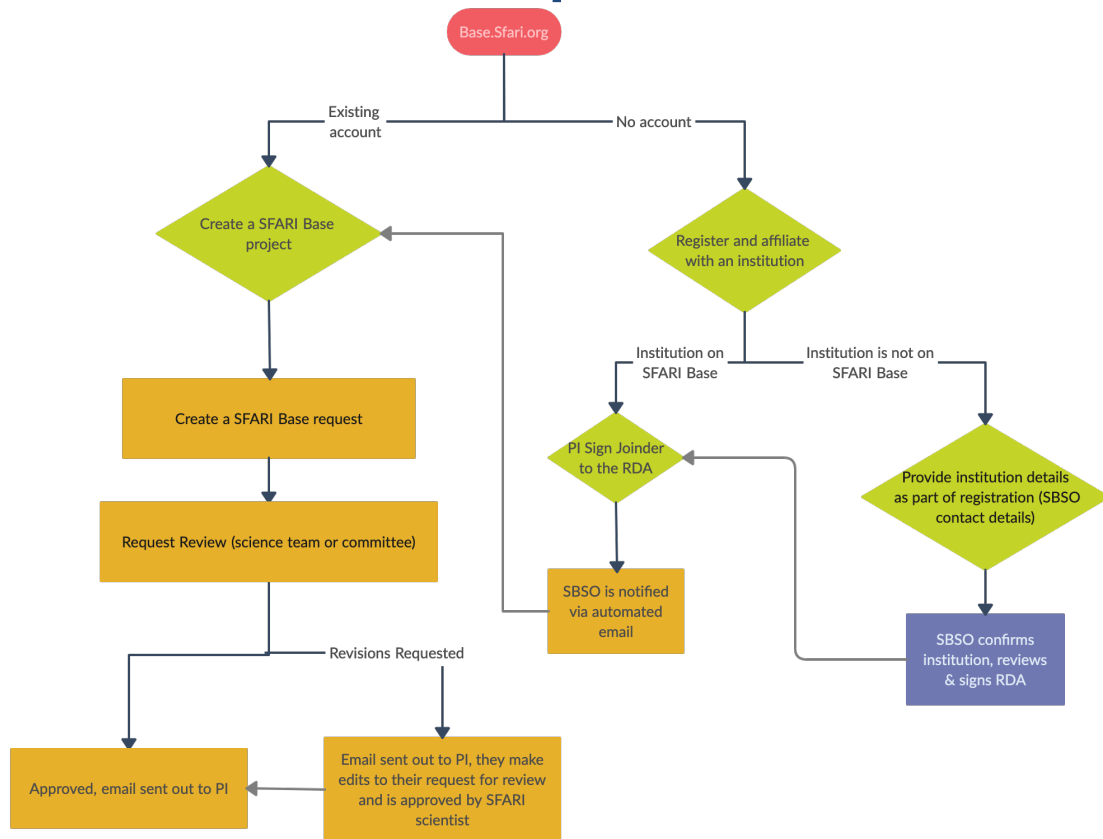

Depositing Data to SFARI Base

Information for submission:

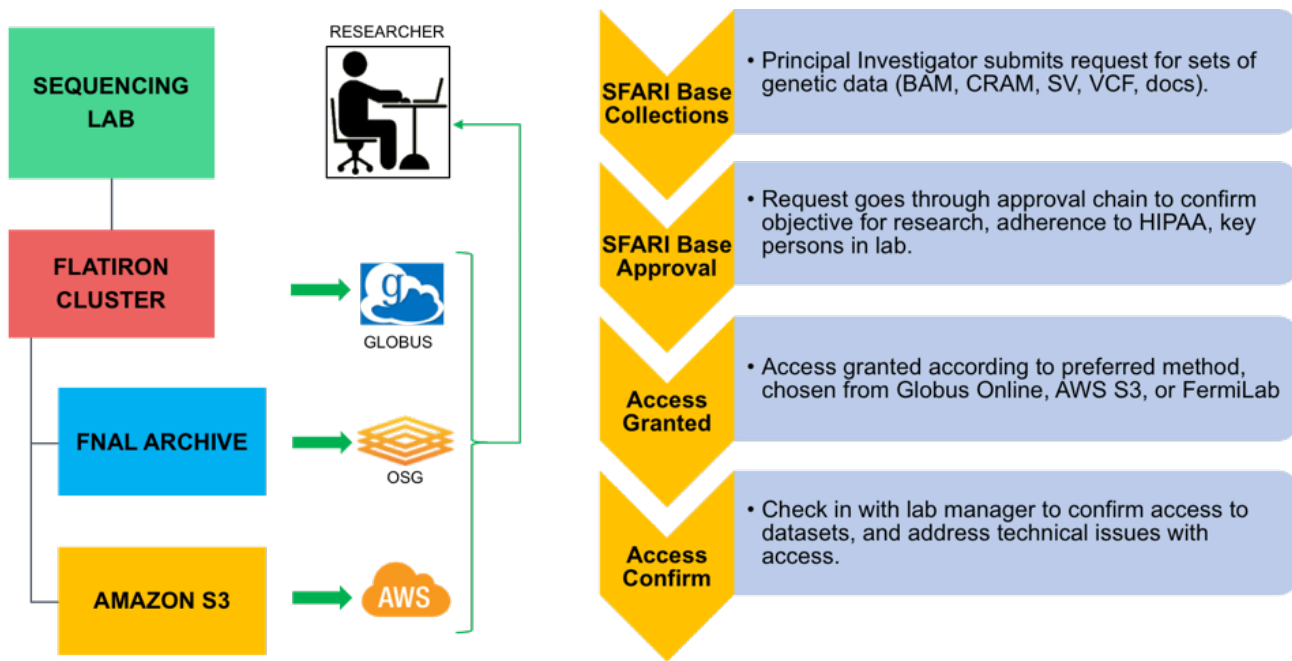

1. Project Title/Abstract/PI/Data manager
2. Data Manifest: List of all files, Each file should be accompanied by the Md5 checksum.
3. Samples IDs and all types of files that will be available per sample.
4. Size of the dataset.
5. Description of the methods/analysis used for generation of the data/analysis files including versions of the software and parameters applied. Github link.
6. Embargo information
7. Manuscripts other references.

SFARIBase ID will be issued to the deposited data set and it can be used as a reference in further publications.

Conclusions

Functional Data Sharing Policy is important for facilitation of the reproducible biomedical research.

Major stakeholders - Researchers, Funders, Scientific Grant Managers, Informatics teams - should be included in the transparent communications and discussions
